

# BREAKTHROUGH TECHNOLOGY WITH DUAL SEALANT BANDS

## SUPERIOR RESISTANCE AND PROTECTION AGAINST:

- 1 WIND BLOW-OFF 2 WIND-DRIVEN RAIN 3 WATER INFILTRATION 4 SURFACE UPLIFT

**Weather-Tite™**  
TECHNOLOGY  
WITH 2 SEALANT BANDS

Canadian Patent No. 2,448,498 / U.S. Patent No. 7,204,063

1 1/2" TRACKNAIL  
Nailing Zone

SEALANT STRIPS ARE LOCATED ON THE FRONT OF MANOIR SHINGLES.

PATTERNED Sealant Band

Weather-Tite™ SOLID Sealant Band

The two sealant bands adhere to the previous row of shingles, providing double protection against the elements.

ALL of BP shingles are equipped with Weather-Tite™ Technology.

To ensure the highest performance even in the roughest weather, BP Canada's **Dakota**, **Yukon SB**, **Manoir**, **Everest 42**, **Mystique 42**, and **Vanguard 42 IR** shingles all feature our exclusive Weather-Tite™ technology. This patented breakthrough technology has been proven to hold its own against the elements while delivering superior protection against water infiltration.

### SUPERIOR WIND WARRANTIES

This groundbreaking technology provides such superior protection that we are able to offer even better wind warranties.\*

### TRIED AND TESTED FOR OPTIMAL PERFORMANCE

BP laminate shingles with Weather-Tite™ technology have passed wind and rain resistance tests, proving they are made to withstand the worst weather conditions.

## GET DOUBLE PROTECTION FOR YOUR ROOF

WIND WARRANTIES		
	STANDARD	HIGH-WIND*
VANGARD 42 IR	180 km/h ▶ 110 mph	220 km/h ▶ 135 mph
MANOIR	180 km/h ▶ 110 mph	220 km/h ▶ 135 mph
EVEREST 42	180 km/h ▶ 110 mph	220 km/h ▶ 135 mph
MYSTIQUE 42	180 km/h ▶ 110 mph	220 km/h ▶ 135 mph
YUKON SB	180 km/h ▶ 110 mph	200 km/h ▶ 125 mph
DAKOTA	180 km/h ▶ 110 mph	200 km/h ▶ 125 mph

TEST METHOD	MINIMUM VALUE		WEATHER-TITE™ TECHNOLOGY
TAS 100 (as referenced in Miami-Dade County)	180 km/h	110 mph	PASSED
UL2390 Class H	240 km/h	150 mph	PASSED

\* High-wind installation instructions must be followed for high-wind warranty to apply.

# WEATHER-TITE™ TECHNOLOGY MAKES IT THROUGH TORNADOES!

In August 2011, a powerful EF4 tornado wreaked havoc in Goderich, Ontario, battering the small town with winds of up to 280 km/h. In addition to downed power lines and uprooted trees, several homes and businesses suffered extensive damage, including many blown off roofs. Among the devastation, two recently completed Everest 42 roofs with **Weather-Tite™ technology** stood completely undamaged. Not a single shingle was lost.

History repeated in September 2018 when a series of tornadoes rated EF1 to EF3 raged on in the Ottawa, Ontario region and neighbouring Quebec towns. Here again, despite considerable damage throughout the area, Mystique 42 shingles featuring **Weather-Tite™ technology** held their own against winds reaching 265 km/h.

Designed and manufactured in our LaSalle, Quebec and Edmonton, Alberta plants, patented **Weather-Tite™ technology** features two bands of high-tack adhesive to deliver the highest performance in the roughest weather. This groundbreaking technology provides the ultimate in wind resistance and leak protection, locking out water and wind-driven rain like no other shingle on the market.

If our **Weather-Tite™** shingles can withstand devastating tornadoes, imagine how well they can stand up to harsh everyday Canadian weather.

## THESE ROOFS SURVIVED TORNADOES THANKS TO WEATHER-TITE™ TECHNOLOGY
